

Welcome to Baby Genie

A Living Companion for Your Mac

> *"Software designed not just to be used, but to be wished into existence."*

✦ The Sanctuary

Baby Genie introduces a new kind of experience to your Mac. It is a quiet, living sanctuary nestled right in your menu bar.

It is software that shapes itself around your life. Whenever inspiration strikes or a new need arises, you simply speak a wish, and a living, responsive interface comes to life right before your eyes.

Whether you seek a serene moment of mindfulness, a live window into your creative workflow, or a gentle morning ritual to start your day, Baby Genie manifests it instantly, with grace, elegance, and complete personal privacy.

Welcome to a canvas made entirely for you.

🌿

Serene & Mindful

A calm presence in your menu bar that respects your focus.

✨

Living Interface

Weaves real, interactive widgets on demand.

🔒

100% Private

Your thoughts and data remain strictly on your Mac.

✦ Three Simple Steps to Awaken Your Genie

Step 1: Place the Lamp on Your Mac

1. In the installer window, drag the golden **Baby Genie** lamp into the **Applications** shortcut.
2. Open your **Applications** folder and double-click **Baby Genie**. The lamp will appear quietly in your menu bar.

Step 2: Open with Confidence on macOS

Because Baby Genie is crafted independently and downloaded directly from our official release vault, modern macOS confirms opening it once:

- **The Quick macOS Settings Route (Recommended):**
  1. If macOS presents a notice, click "OK".
  2. Open **System Settings** (Apple menu) and select **Privacy & Security**.
  3. Under Security, click **"Open Anyway"** next to Baby Genie.
  4. Confirm with Touch ID or your password. *(You only do this once. After this, your Genie awakens instantly.)*
- **The One-Step Terminal Command (For power users):**
  If you prefer Terminal, paste this single line and press Return:

```
xattr -cr "/Applications/Baby Genie.app"
```

Step 3: Choose Your Preferred AI Engine

Baby Genie connects to an intelligent coding engine to build your living widgets in real time. Choose whichever AI you prefer:

Option 1: Claude (Recommended)

1. Open Terminal and install:

```
npm install -g @anthropic-ai/claude-code
```

2. Type `claude` to sign in.

Option 2: Codex by OpenAI

1. Open Terminal and install:

```
npm install -g @openai/codex
```

2. Type `codex login` to sign in.

Note: Both tools use Node.js. If needed, the free installer is available in seconds at nodejs.org.

✨ The Art of Wishing

Click the golden lamp in your menu bar, type into **"Make a Wish..."**, and watch your thoughts take living form:

🌿 Mindfulness & Stillness

- *"manifest a peaceful breathing circle with ambient sound"*
- *"grant a mindful hydration and posture pause for deep work"*

✨ Morning Inspiration & Focus

- *"manifest a morning wisdom quote with daily sunrise notes"*
- *"create an intentional 3-item priority list for today"*

📊 Living Instruments & Telemetry

- *"summon a live telemetry gauge for my processor, memory, and battery"*
- *"manifest a clean tracker for my weekly creative goals"*

🎵 Atmosphere & Space

- *"conjure a minimalist audio controller for lo-fi and focus beats"*
- *"summon a subtle world clock tracking Tokyo, London, and San Francisco"*

When your widget appears, click **"Keep"** to save it to your space, or speak another wish to transform it anew.

🔒 Crafted for Privacy & Serenity

🔒 100% Private, On-Device Sovereignty

Your thoughts, wishes, and data remain exclusively yours. Baby Genie operates directly on your Mac. Nothing is harvested, tracked, or sent to third-party ad networks.

Helpful Tips:

- **Spotlight Shortcut:** Press `Cmd + Space`, type `Baby Genie`, and press Return anytime to bring the lamp directly to your front view.
- **Engine Indicator:** Click the Settings gear in the header anytime to view your AI connection status.
- **Quiet Closure:** Click the power icon in the header whenever you wish to close the lamp cleanly.
